Playing Games

Designing & Development

HTML, CSS, BOOSTRAP, JAVASCRIPT, REACT.JS, NODE.JS, WORDPRESS, PHOTOSHOP, FIGMA

EXPERIENCE

UI Designer – Intern | Ogma IT Conceptions Pvt. Ltd.

Period: 2024-11-04 - 2025-04-04

During the above period, we found him hard working, consistent, honest, and diligent in his assigned duties and responsibilities.

Frontend Developer, WordPress Developer, UX Design (Figma/Photoshop) | Topsia Website Designs

Period: 2025-05-01 - Present

Working as a UI & Backend Developer at Topsia Website Designs, contributing to the development of responsive and user-friendly websites and web applications. Responsible for frontend development, backend functionality, and WordPress website customization. Experienced in creating modern UI designs using Figma and Photoshop, while developing interactive web interfaces using HTML, CSS, Bootstrap, JavaScript, and React.js. Also work with Node.js to implement backend functionality and deliver efficient, scalable web solutions.

Title: UI & Backend Developer

Technologies: HTML, CSS, BOOSTRAP, JAVASCRIPT, REACT.JS, NODE.JS, WORDPRESS, PHOTOSHOP, FIGMA

PROJECTS

Weather API | Weather Information & Forecasting System

Period: 2025-08-11 - N/A

Built a modern Weather Application using React.js that integrates with a weather API to provide real-time weather data. The app allows users to search locations worldwide and displays key metrics such as temperature, humidity, pressure, sunrise/sunset times, and weather conditions. It also includes a 5-day forecast feature, dynamic UI rendering, and responsive design for better usability across devices.

Blog Management System | Blog Management & Publishing Platform

Period: 2026-08-04 - 2026-08-14

Blog Management System -- is a full-stack web application developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js). The platform provides a complete blogging environment where Authors can create, manage, draft, and publish blog posts, while Readers can browse, search, filter, like, and comment on published content. Administrators can manage users, categories, tags, blogs, comments, and overall platform activity. The application includes secure JWT authentication, role-based access control, profile management, blog CRUD operations, featured-image uploads, SEO-friendly slugs, search and filtering, pagination, comments, likes, dashboards, and analytics. MongoDB Aggregation Pipelines are used to generate author, category, blog-performance, reader-activity, and engagement reports. The project was developed to provide a scalable and secure real-world blogging platform while demonstrating practical full-stack development, REST API development, database management, authentication, authorization, and data analytics.

Technologies: MongoDB, Express.js, React.js, Node.js

RBAC Assignment Management System | Webskitter Academy

Period: 2026-09-23 - 2026-09-30

A production-style REST API implementing full Role-Based Access Control across three roles — Admin, Manager, and Employee — each with a distinct, enforced permission matrix (e.g., Employees see only tasks assigned to them; Managers see and manage only tasks they personally assigned; only Admins can edit task details or delete records). Built with Node.js, Express, and MongoDB/Mongoose, using a layered architecture (routes → middleware → controllers → services → models) with JWT access + refresh token authentication, Joi request validation, Cloudinary-backed file attachments via Multer, and a dedicated AssignmentHistory collection providing a full audit trail of every task creation, reassignment, and status change. Includes task CRUD, comments, attachments, role-scoped dashboards, and admin-only user/role management, secured with Helmet, CORS, and rate limiting.

Role: Backend Developer — Designed & Implemented RBAC System

Links: https://github.com/rehanmdmoin-dev/RBAC-Project.git

Technologies: Node.js, Express.js, MongoDB, Mongoose, JWT (JSON Web Tokens), Joi, Multer, Cloudinary, bcrypt.js, Helmet, CORS

ProConnect – MERN Stack Job Portal & Professional Networking Platform | Personal Project- Web skitters Academy

Period: 2026-09-18 - 2026-10-07

ProConnect combines a LinkedIn-style networking platform with a job portal. The REST API has about 100 endpoints over 14 MongoDB collections. It uses JWT access and refresh tokens with role-based access control for job seekers, recruiters and admins, plus ownership checks so recruiters can only manage their own jobs and applicants. Features include rich profiles with resume and image upload, company pages with follows, job posting with a draft, active and closed lifecycle, multi-filter job search with pagination, applications with duplicate prevention and a status audit trail, a recruiter applicant dashboard, connection requests, a social feed with likes and comments, messaging, notifications, interview scheduling, and an admin moderation and analytics layer. Reports and search run on MongoDB aggregation pipelines. The Next.js frontend includes a role-aware dashboard, job search with filters, and an application tracker that shows each application's progress through the hiring stages.

Role: Full-Stack Developer

Technologies: Next.js (React), Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, JWT (access and refresh tokens), Joi, Multer, Cloudinary, Nodemailer, bcrypt.js, Helmet

Secure Product Management System | Personal Project- Web skitters Academy

Period: 2026-07-17 - 2026-06-30

Developed a secure, full-stack Product Management System using the MERN stack, enabling authenticated users to manage their own products through CRUD operations. Implemented JWT-based authentication, email verification, password recovery, Joi validation, Cloudinary image uploads, and product search, filtering, and sorting. Designed RESTful APIs with ownership-based authorization and a responsive React frontend.

Role: Full-Stack MERN Developer

Technologies: Next.js • Node.js • Express.js • MongoDB • Mongoose • JavaScript • JWT Authentication • bcrypt • Joi • Cloudinary • Nodemailer • REST APIs

MyStore — E-commerce Product Management Platform | My-Stores- Web skitters Academy

Period: 2026-07-14 - 2026-07-30

Built a full-stack e-commerce product management application with a Next.js dashboard and an Express API. It supports account registration with email OTP verification, login, profile and password management, product browsing and filtering, and creating, editing, and deleting products with image uploads. Product changes are restricted to the user who created them.

Role: Full-Stack Developer
